Retrospect & Prospect Infrastructure Investment in Global Finance

 **Deadline: 31 July 2023**

Dear Colleagues,

Investments in innovative and functional infrastructure are commonly considered to be the cornerstone of sustainable and equitable development and economic expansion. An effective infrastructure investment, whether in the economic (transport, utilities, telecommunications) or social (education, health, community services) fields, can support a nation achieve its socioeconomic development goals. For trade to take place and for manufacturers to quickly acquire raw materials and deliver finished goods to customers, it is vital to keep good condition on roads, railways, airports, and ports. Resilient water infrastructure is also crucial to meet the pressures of ongoing urbanization, demographic change, and global warming.

Furthermore, funds should be set aside for the construction of new buildings, lecture halls, laboratories, and other essential elements of learning environments in schools and universities because these advancements enhance instruction, boost student achievement, and lower dropout rates. Not least, it is fundamental to make investments in healthcare infrastructure to guarantee that it is adequately prepared for any prospective medical crisis, whether it be a contagious virus or a catastrophic event. Therefore, to promote wealth creation, maintain sustainable growth, and improve wellbeing, infrastructure investment is imperative.

Keywords:

- Education infrastructure
- Healthcare infrastructure
- Telecommunications infrastructure
- Water and wastewater infrastructure
- Transport infrastructure
- Green infrastructure
- Energy infrastructure
